SAFE  
SIDE.**

# STANDARD FIRE

STANDARDS EXIST.  
THEY DEFINE MATERIALS,  
THEY DEFINE CONSTRUCTIONS,  
THEY DEFINE INSTALLATIONS.

## BUT THERE IS NO SUCH THING AS A STANDARD FIRE.

Fire has more than one cause. The course it takes, its intensity and how it spreads cannot be standardized – fire is a force of nature.

Standards merely define the average of all possibilities. And products which conform to these standards are just that – average.

Precision, materials expertise, discipline and experience have taken us beyond this point.

That is why we are able to offer our customers solutions that exceed all standards.

We founded Ei2 PROTECTOR in 2006 with the goal of redefining the fire prevention market.

**Our focus:** maximum quality, constant development and innovative design.

A concept that has been the foundation of our success. Our strategy is confirmed by a market share of 25 %. Right in our very first year, we won the tender for Austria's largest undivided project: equipping the Vienna Skylink.

It is not only our knowledge of materials and building processes but also our manufacturing and installation experience that make our customers put their trust in our work. That's why we will continue to forge new paths rather than following trends and standards.

**We measure ourselves against the needs of the times.**

**And have been doing so since 2006.**

# PROGRESS IN FORM

AT THE BEGINNING,  
THERE IS A THOUGHT.  
AT THE END, A PRODUCT.

In between, there is a complex process. Staff at Ei2 PROTECTOR are constantly working on finding and realising new solutions and possibilities in the field of fire protection.

These possibilities have by no means been exhausted. The more complex the problems, the more innovative the answers have to be.

Fire is not even involved in many cases. For years, we had to contend with the problem that fire protection doors locked whenever there was a power cut. Ei2 PROTECTOR tackled this problem and has developed doors with an integrated emergency power supply. This ensures that Ei2's fire protection doors only lock when they are supposed to.

Anyone who rests on their laurels won't find the time for new things. Ei2 PROTECTOR is constantly optimizing systems and will continue to do so in the future.

# STYLE & SAFETY

Fire protection systems have to protect people and objects from fire – but they do not have to look like it. They are integrated into the design and only become visible when they are needed.

Good fire protection design is a combination of style and safety. As we manufacture all important parts of our products ourselves, we are very flexible in terms of design. This enables us to create fire protection barriers in line with your aesthetic specifications.

**Even if they are invisible.**

# FULL SERVICE

Making progressive, design-oriented products is only half the job. The goal is to provide full service.

Ei2 PROTECTOR does not employ sales personnel – only experts. Our experienced staff act as interfaces for planning knowledge and production quality. They are not only familiar with all the technical details of each product, but also contribute years of experience to each of them. Competence in both manufacturing and installation.

And beyond.
